REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record fail to teach or suggest an integrated circuit having a power management comprising a processing circuit, at least one memory array coupled to the processing circuit for providing data to the processing unit, and a control circuit coupled to at least one memory array, the control circuit removing electrical connectivity of the data least one memory array to a supply voltage terminal by firstly disabling all accesses to the memory array and secondly removing electrical power to all of the at least one memory array to reduce leakage current in the at least one memory array (claim 1, and the method of using this device as claimed in claim 21); a processing circuit, a plurality of memory bit cells contained in a memory array, the plurality of memory bit cells coupled to a power supply terminal for creating a first power plane, a memory array peripheral circuit that is peripheral to the plurality of memory bit cells, the memory array peripheral circuit being selectively coupled to the power supply terminal for creating a second power plane that is independent of the first power plane, and a control circuit coupled to the memory array peripheral circuit that is peripheral to the plurality of memory bit cells, the control circuit selectively removing the electrical connectivity to the power supply terminal of the memory array peripheral circuit that is peripheral to the plurality of memory bit cells (claim 15, and the method of using this device as claimed in claim 24).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
